Product description

Stainless steel wire basket suitable for hospitals and laboratories. The steel basket is a safe and hygienic means of transport and storage for sterile packages. Extremely suitable for safe transport of products that must be made and remain sterile. This wire basket is also suitable as a means of storage for sterile packages. This steel wire basket is widely applicable for laboratories, pharmaceuticals and healthcare institutions. Stainless steel is an ideal material to work with when hygiene is a must. Stainless steel has an excellent surface to clean and is resistant to cleaning at high temperatures. The nestable and stackable baskets also have extra length of wires across the bottom, which creates even less point load on the packaging material and reduces the risk of damage.

The stackable baskets are also nestable without the addition of extra handles, making them user-friendly and safe (no pinched fingers). This creates considerable space savings during storage and transport when you have not used it.

The baskets are produced according to the highest quality standards. Weld burrs, gaps, deformation of wires or weld discoloration are not allowed. The top edge has a single wire, which is much more hygienic compared to a double edge.

Specifications

Article arrangement: New

Version: fixed construction stainless steel

Food-safe: yes

Surface treatment: stainless steel

Internal length (mm): 500

Internal width (mm): 350

Internal height (mm): 95

Type number: 3712

EAN Code (Gtin) 8719424165234

Type: nestable and stackable

Material: stainless steel

Euronorm (mm): 600 x 400

Length (mm): 600

Width (mm): 400

Height (mm): 100

Weight (kg) 2

Additional specifications: remaining batch
