Product description

Steel drip tray suitable for four 200 liter drums. The capacity of this container is 800 litres. The drip tray is made of painted steel and the grille is made of hot-dip galvanized steel.

Guideline for storage and temporary storage for drip trays with regard to fire safety, occupational safety and environmental safety according to PGS 15 (publication series hazardous substances):

A storage facility must be constructed in such a way that leaked or spilled hazardous liquid is collected in a container. To this end, the collection container must have a capacity of at least 110% of the largest package. However, if 10% of the total content of the packages is more than 110% of the content of the largest package, then the collection capacity must be equal to 10% of the total content of the packages together. The collection container must be sufficiently resistant to the stored liquids.

The collection capacity only applies to liquids. Empty, uncleaned packaging does not count. The collection facility may also be realized in storage. The choice of location for the collection facility may depend on the hazardous liquids stored. Kruizinga.nl is not liable for the type of use!

Please note! Any form of modification is not allowed. If this is the case, all regulations will lapse.

Specifications

Article arrangement: New
Version: for 1-4 200 l drums
Walls: walls closed
Top: 1000kg/m²
Colour: colorless
Length (mm): 1460
Height (mm): 525
Loading capacity (kg): 1520
Collection volume (ltr): 885
Additional specifications: StawaR approved (DE)

Type: receptacle for drum
Material: steel
Floor: with galvanized grid
Subgroup: retention basin steel
Surface treatment: galvanized
Width (mm): 1460
Insertion height (mm): 100
Weight (kg) 178
Type number: 404
EAN Code (Gtin) 8719424006193
